[Algebraic structure - Wikipedia](#)

In mathematics, and more specifically in abstract algebra, an algebraic structure on a set  $A$  (called carrier set or underlying set) is a collection of finitary operations on  $A$ ; the set  $A$  with this structure is also called an algebra. Examples of algebraic structures include groups, rings, fields, and lattices. More complex structures can be defined by introducing multiple operations, different

[What does algebraic structure mean? - Definitions.net](#)  
The general theory of algebraic structures has been formalized in universal algebra. Category theory is used to study the relationships between two or more classes of algebraic structures, often of different kinds. For example, Galois theory studies the connection between certain fields and groups, algebraic structures of two different kinds. In a slight abuse of notation, the word "structure
