[String Theory and the History of Non-Euclidean Geometry ...](#)

One version of non-Euclidean geometry is Riemannian geometry, but there are others, such as projective geometry. The reason for the creation of non-Euclidean geometry is based in Euclid's Elements itself, in his fifth postulate, which was much more complex than the first four postulates.

[What Are Euclidean and Non-Euclidean Geometry?](#)

A non-Euclidean geometry is a rethinking and redescription of the properties of things like points, lines, and other shapes in a non-flat world. Spherical geometry which is sort of plane geometry warped onto the surface of a sphere is one example of a non-Euclidean geometry.

[Non-Euclidean geometry - Wikipedia](#)

As Euclidean geometry lies at the intersection of metric geometry and affine geometry, non-Euclidean geometry arises when either the metric requirement is relaxed, or the parallel postulate is replaced with an alternative one.

Non-Euclidean geometry, literally any geometry that is not the same as Euclidean geometry. Although the term is frequently used to refer only to hyperbolic geometry, common usage includes those few geometries (hyperbolic and spherical) that differ from but are very close to Euclidean geometry (see table).

[Euclidean and Non-Euclidean Geometry](#) Euclidean Geometry Euclidean Geometry is the study of geometry based on definitions, undefined terms (point, line and plane) and the assumptions of the mathematician Euclid (330 B.C.) Euclid's text Elements was the first systematic discussion of geometry. While many of Euclid's findings had been

[Non-Euclidean Geometry - University of Pittsburgh](#)

If one has a prior background in Euclidean geometry, it takes a little while to be comfortable with the idea that space does not have to be Euclidean and that other geometries are quite possible. In this chapter, we will give an illustration of what it is like to do geometry in a space governed by an alternative to Euclid's fifth postulate.

The crucial difference between non-Euclidean and Euclidean geometry lies in the 5th axiom, also known as the parallel postulate. This postulate is assumed to be true in Euclidean geometry, but false in non-Euclidean geometry.
