[Congruence semimodular varieties I: Locally finite varieties](#)

If  $\mathcal{S}$  is the class of semimodular lattices and  $\mathcal{L}$  is the class of all lattices, then Whitman's proof that every lattice embeds into a partition lattice shows that  $\mathcal{S}(\mathcal{L}) = \mathcal{L}$ .

[Minimal Paths between Maximal Chains in Finite Rank ...](#)

Reduced decomposition paths in semimodular lattices To generalize Theorems 2.2 and 2.3 to semimodular lattices, we relate minimal paths between two flags in a semimodular lattice to reduced decompositions of the Jordan-Hölder permutation between the flags. The flags along a minimal path are related to the weak Bruhat order on  $S_n$ . This partial order on permutations in  $S_n$  is also related to

Ore [13] proved that sets have semimodular congruence lattices and Hall [7] and Freese and Nation [6] proved that the same is true for semilattices. More-over Freese and Nation showed that congruence modularity has little relevance in varieties of semigroups, since any congruence modular variety of semigroups is in fact a variety of groups. Lallement [11] proved that any completely simple

[On the covering graph of balanced lattices - ScienceDirect](#)

Modular lattices and geometric lattices are instances of semimodular lattices which are both strong and dually strong (balanced). Indeed, for semimodular lattices the concepts of balanced and strong are equivalent (see [4, 9]).

3. Orientations from direct products Recall that an element  $a$  of a lattice  $L$  is in the center of  $L$ , if there is a direct product decomposition  $A \times B$  of  $L$  for which  $a \in A$ . (PDF) Clarification To 'Congruence Lattices Of Semilattice'

Some examples of classes of semigroups with modular lattice of congruences like Baer-Levi semigroups or special generalised Bruck extensions of semigroups by groups have been given. Commutative semigroups whose congruences form a chain or are

The lattice of all complete congruence relations of a complete lattice is itself a complete lattice. In this paper, we characterize this lattice as a complete lattice. In other words, for a
