As the analogue of the enantiomeric chiral resolution cyclodextrin derivatives are widely used as chiral selectors for separation of diastereomers. *Crucial Chiral Separation of Indapamide Enantiomers by Capillary ...*

Optimization of the analytical method. Stereoselectivity of the separation is influenced by several experimental parameters, such as CD type and concentration, ionic strength, pH of the BGE, capillary temperature, applied voltage, capillary length, addition of organic solvents and electro-osmotic flow (EOF).

The Separation of Enantiomers by Capillary Electrophoresis ...

This book gives a comprehensive overview on the principles of physical and mathematical modelling of enantiomer separation by CE. Method development strategies are shown and cyclodextrins as a popular group of chiral selectors as well as some other selectors used as buffer additives for enantiomer separation in free solution are described.

Capillary electrophoretic separation of AML enantiomers using different CD derivatives as chiral selectors. The chemical composition and the concentration of the buffer can affect the baseline stability, peak shape and separation selectivity.

Capillary Electrophoresis: an Attractive Technique for ...

Capillary Electrophoresis (CE) separates compounds that differ in charge to hydrodynamic size ratio and is an excellent technique for the analysis of polar compounds. The technique is particularly applicable to chiral separations. Chiral CE separation is achieved by adding a chiral selector to the so called background electrolyte. The enantiomers then form fast, reversible equilibria with the selector. In this paper a simple method development strategy for basic, acidic and neutral compounds

A chiral ionic liquid, namely 1-ethyl-3-methyl imidazole L-tartrate ([EMIM][L-Tar]), was applied as a new chiral ligand for the separation of tryptophan, tyrosine, and phenylalanine enantiomers by chiral ligand exchange capillary electrophoresis (CE).
